

100% bio potat-o-plates

Garbage made out of plastics is a worldwide problem. It pollutes our waters, the oceans and our entire environment. Furthermore during manufacturing of plastic products toxic materials are discharged and contaminate air and water. In addition plastic is made out of crude oil – a non renewable resource.

It's time to rethink our waste!

One-way dishes and packaging can be made of potatoes. A product which is **food safe, flavorless and biodegradable** at your home compost. When manufactured it is environmentally friendly and does not use up important resources. Why not have a Good Feeling when you dispose naturally produced dishes made out of potatoes at your compost!

Save our environment! It's worth it!

whether in white*

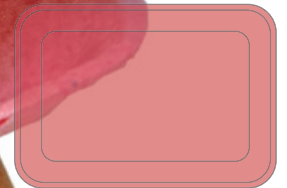

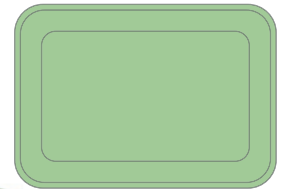

A wide range of shapes...

available as Cups, Bowls, Plates, Trays, Packaging and Bags
or with your ideas, are doable.

...or dyed*,

...and colors:

The whole light-color-spectrum of the rainbow or your own color of your company.

whether naturally or water-resistant*.

*for sure food safe,
flavorless and of course
100% compostable!

A note for Producers:

It is a positive signal for the community
to be eco-friendly.
Your product will increase in value.
